Arc	Sector
Adjacent	Cosine Rule
Hypotenuse	Sine Rule

The area bounded by two radii of a circle and the included arc.	The curved part of the circumference of a circle.
Used to find the length of a side of a triangle given the lengths of the other two sides and the angle between them.	The side of a right triangle that is next to the angle being considered (not the hypotenuse).
A formula used to find the length of a side of a triangle given the lengths of two other sides and the angle between them.	The side of a right triangle that is opposite the right angle.
