

Constraints

Objective function

Feasible region

Optimal solution

Simplex method

Graphical method

Sensitivity analysis

Corner points

Degenerate solutions

Mathematical expression to be optimized in linear programming

Limitations or restrictions on variables in linear programming

Solution maximizing or minimizing objective function while meeting constraints

Set of all solutions satisfying constraints in linear programming

Method for solving linear programming problems with two variables using graphs

Iterative method for solving linear programming problems

Points where feasible region boundary lines intersect

Process of determining how optimal solution changes with varied coefficients

Solutions with one or more basic variables being zero
