Probability	Venn Diagrams
Probability Trees	Two-way Tables
Mutually Exclusive	Conditional
Distribution	Independence
Event	Outcome
Trial	

A diagram using circles to represent sets and show relationships between them	A number between0 and 1 representing the likelihood of event occurring
A table that displays frequencies for two variables, useful for calculating probabilities	A diagram that uses branching to calculate probabilities of combined events
The probability of one event given that another event has occurred	Two events that cannot occur at the same time
Two events where the outcome of one has no influence on the outcome of the other	The probability of each possible outcome in a scenario
A possible result of a trial or experiment	A set of possible outcomes
	A single performance of an experiment
